Census Data Analysis for Development

Objective:

Census Data Analysis for Education status, Socio-Economic, Employment generation and Product selling. This project would help in analyzing socio-economic status, employment and education on various factors like age group, citizenship, income, etc. All the above would help in development of both individual and nation.

Given Data:

1. **Census_Records.json:**

Age	Education	Marital Status	Gender	Tax Filer Status	Income	Parents	Country of Birth	Citizenship	Weeks Worked

2. **AgeGroup.dat:**

   Fields: Age and Group

Census Analysis on following factors:

1. Education

2. Finance

3. Social

4. Citizenship and Immigrants

5. Employability

6. Product Selling & Others

Education:

Education means a lot in everyone's life as it facilitates our learning, knowledge and skill. Education is must for both men and women equally as both together make a healthy and educated society. An educated member certainly has a greater chance to contribute to his community. Education helps you become an active member of the society and participate in the ongoing changes and developments.

For Example: Education status for each category of female and male. How many female adults have Bachelor's degree.

We have achieved the same in our project in various Tasks mentioned below.

1. Total count of male/female based on education.

2. Total count of employed/unemployed based on education.

3. Total count for people in age range of 18-25 based on education.

Finance:

Taxes are like income for the government so that they can pay for socialized services within your country for service such as health care, pension funds, welfare, homeland security, war, etc. The countries with extremely prosperous and the citizens have a high per capita income wants to pay the tax regularly.

For example, Count of Tax filer status for each category of citizenship, what is the count of non-filer of middle-aged female who is a Foreign born- Not a citizen of US.

We have achieved the same in our project in various Tasks mentioned below.

1. Tax analysis total and gender wise

2. Per Capita Income (PCI) analysis consolidated, gender wise and category wise

Socio-economic status:

Analyzing socio-economic status in for each age group and gender based on citizenship- Average income: Average hours an individual works.

We have achieved the same in our project in various Tasks mentioned below.

1. Total amount dispensed on pension in x year(s)

2. Total amount dispensed on scholarship in current year

3. For given age range employable female widowed and divorced count

Citizenship and Immigrants

Analyzing various factors on both US citizenship and immigrants on various factors.

For example, how many non - United States born has acquired U S citizenship.

Count the total number of people whose Country of Birth is not United States and has citizenship as Foreign born- U S citizen by naturalization

We have achieved the same in our project in various Tasks mentioned below.

1. Citizens and immigrants count for employed lot
2. Non-US citizen(s) tax filer status
3. Country of birth wise count for US citizenship by naturalization

Employment Generation:

Analyzing qualification and gender in each category.

For example, Count how many adult male have an education as some college but no degree and their average salary.

We have achieved the same in our project in various Tasks mentioned below.

1. For given age range employable female widowed and divorced count
2. Degree wise count for employability
3. Total count of employed/unemployed based on education.

Product Selling & Others:

Based on given data we can analysis selling of new product in the market also we can analysis factors like babies whose age less than 5 for vaccination, Orphan count with no education. Counting orphan who are not studying and their average income.

For example, count total infant whose parents are not in universe, have no education and their average income.

We have achieved the same in our project in various Tasks mentioned below.

1. Voter(s) count in x year(s)
2. Customer base analysis

Technology used:

Apache Hadoop:

Apache Hadoop an open-source software framework used for distributed storage and processing of very large data sets. It consists of computer clusters built from commodity hardware.

Characteristics of Hadoop:

- Reliable
- Flexible
- Economical
- Scalable

Map reduce:

Hadoop MapReduce is a software framework for easily writing applications which process vast amounts of data (multi-terabyte data-sets) in-parallel on large clusters (thousands of nodes) of commodity hardware in a reliable, fault-tolerant manner.

A MapReduce job usually splits the input data-set into independent chunks which are processed by the map tasks in a completely parallel manner. The framework sorts the outputs of the maps, which are then input to the reduce tasks. Typically both the input and the output of the job are stored in a file-system. The framework takes care of scheduling tasks, monitoring them and re-executes the failed tasks.

Apache Pig:

Apache Pig is a platform for analyzing large data sets that consists of a high-level language for expressing data analysis programs, coupled with infrastructure for evaluating these programs. The salient property of Pig programs is that their structure is amenable to substantial parallelization, which in turns enables them to handle very large data sets**.**

Features:

- Ease of programming
- Optimization opportunities
- Extensibility.

Apache Hive:

The Apache Hive data warehouse software facilitates reading, writing, and managing large datasets residing in distributed storage using SQL. Structure can be projected onto data already in storage

HARDWARE & SOFTWARE REQUIREMENTS:

Operating System   :   LINUX

RAM   :   8GB

System Type   :   64 bit OS

Development Tool   :   Eclipse

Language Used   :   MapReduce Java,

Education:

Task1: Total count of male/female based on education.
